

# Micro:bit Flipbook

1. Create a new project on the make code editor and call it flipbook:  
<https://makecode.microbit.org/>
2. We are going to use the forever block for this example
3. In the forever block place two “show leds” blocks. These leds should be drawn like in the picture below.

4. Download this to your micro:bit and see what happens. You should hopefully see a beating heart animation. **Challenge:** Try making this animation speed up or slow down by using a wait block
5. Animation is just a series of pictures all playing one after another with little gaps in between so it looks like a moving picture. **Have a go at creating your own animation using the 25 LEDs on the micro:bit**
